HIPERPAVE III SOFTWARE

The US FHWA has recently released Version III of the Hiperpave software for determining sawing times for contraction joints. It now covers the assessment of the influence of pavement design, mix design, construction methods and environmental conditions on the early age behaviour of PCPs. It also includes the User Manual.

Paving Engineers and Superintendents will find it as a handy tool to check on operations. It would not hurt to have it in your technical library of PINs.

The package can be downloaded free from:
